Introduction

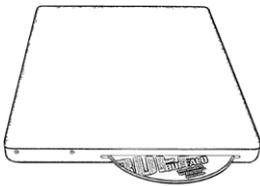

Congratulations on your purchase! The AirStation WLI-UC-G Turbo G wireless USB Adapter connects your notebook computer or desktop PC to a 2.4 GHz 802.11g or b network. It can also serve as an access point for connecting AOSS compatible wireless devices to your existing network.

Package Contents

- WLI-UC-G USB Adapter
- USB Extension Cable
- Utility CD with Manual
- Quick Setup Guide
- Warranty Statement

Installation

Insert the AirNavigator CD into the CD-ROM drive of your computer. Do not insert the USB key into a USB port yet.

This window will open on your desktop.
Select *Begin Installation*.

Installation

The WLI-UC-G may be installed as either a wireless client or a wireless access point.

Choose *Client Mode Installation* if you want to add a wireless client to your computer, allowing it to connect to existing wireless networks. Turn to the next page for instructions on Client Mode Installation.

Choose *Access Point Mode Installation* if you want to configure the WLI-UC-G as a simple wireless access point for connecting AOSS-compatible devices such as game consoles. Access Point Mode Installation instructions continue on page 12.

Client Mode Installation

To install drivers and use the wireless connection tool built-in to Windows, click *Install*.

Included on the disk is Buffalo's Client Manager 3 software. To install it, click the checkbox beside it in the Software Option List and then click *Install*. Client Manager 3 includes the option of automatically connecting to AOSS or WPS devices.

Click *Next* to step through the installation wizards. When the wizard asks you to insert your device, plug the AirStation WLI-UC-G in to a USB port on your computer. Drivers will install automatically, and if you checked its box, Client Manager 3 will install as well. When the wizard is complete, click *Finish*.

Using Windows® Zero Config

To use Windows' built-in wireless utility, click on its icon  in the systray. Zero Config will open.

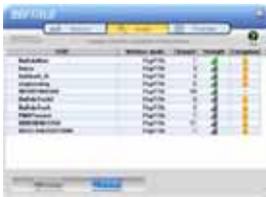

All available wireless networks will be listed. Click on your network to highlight it and then click *Connect*.

If your network requires a network key or password to connect, enter it twice. Click *Connect*. When the wireless icon in the systray changes to , you are connected to the wireless network.

Using Client Manager 3

If you installed Buffalo's Client Manager 3 software, then you will use it to connect instead of Windows Zero Config. Click on its  icon in the systray to open Client Manager.

Click on one of the three buttons up top to navigate to the three different sections of Client Manager. The *Scan* tab shows a list of available wireless networks. Highlight one and click *Connect* at the bottom to connect to that network.

The *Status* tab shows information about your current wireless connection.

The *Profiles* tab lets you create, store, and prioritize common wireless connections. The AOSS button is also located here.

Using AOSS

AOSS (AirStation One-Touch Secure System) is a simple system for connecting wireless clients to an access point while enforcing the most secure possible connection encryption type. Users no longer need to worry about choosing the proper security protocols, IP addresses, or SSID. AOSS determines the optimal connection and configures itself in seconds.

Your WLI-UC-G has its AOSS button in the Client Manager software. If your router or access point supports AOSS,

then AOSS will let you connect the WLI-UC-G to your wireless network, easily and securely.

Your router or access point must support AOSS to use it. If you would rather configure your wireless connection manually, select the *Scan* tab in Client Manager to scan for available networks.

Start Client Manager by double clicking on the black antenna icon  in your systray, or by launching it from your Start Menu: Programs >> Buffalo >> AirStation Utility >> ClientManager3.

Using AOSS

- From the Status Screen, select the *Profiles* tab.
- Initiate AOSS by clicking the blue AOSS button on the Client Manager's screen. The AOSS wizard will appear.
- Now, press the AOSS button on your access point. Hold it down until the AOSS LED on the access point begins to flash (1-3 seconds).

Using AOSS

Once AOSS is complete (about 30 seconds), the connection is archived as a profile for later use. To minimize Client Manager to the system tray, click the 'X' in the top right corner.

Notes:

AOSS will scan for an AOSS partner for about two minutes. If it times out before finding one, just press the AOSS buttons again.

Output power is reduced to 25% of normal during AOSS for security reasons. If you're having trouble making an AOSS connection, temporarily move the devices closer together.

AOSS will automatically use the highest level of security available for all currently connected wireless devices.

If you have trouble connecting with AOSS, temporarily disable all personal firewalls on your PC, such as ZoneAlarm or Microsoft Personal Firewall. These programs may be re-enabled after AOSS has finished. Also, make sure that any other wireless client manager software (including Windows XP's Zero Configuration Service) is disabled before using Client Manager.

Access Point Mode Installation

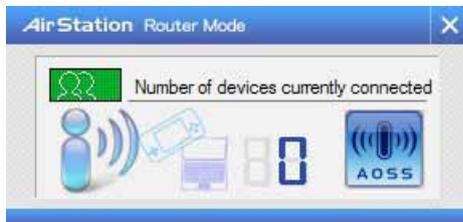

Besides its wireless client capability, the WLI-UC-G can function as a wireless access point. If your computer already has a connection to the internet, and you want to connect AOSS-compatible devices wirelessly, then choose *Access Point Mode* during installation. Note: If you have firewall or antivirus software running on the computer, temporarily disable it before continuing.

Click *Install* to continue. Continue clicking *Next* to step through the installation wizard. When the program asks for your device, plug the WLI-UC-G into a USB port on the computer and click *Next*, *OK*, and *Finish*.

Using Your AirStation as an Access Point

Many kinds of AOSS devices can be connected to the AirStation WLI-UC-G in access point mode. Right click on the  icon to open the window shown at left. Click or push the AOSS button for the device you want to connect to start AOSS. Then, click on the AOSS button in this window. AOSS will set up your connection automatically.

In the following examples, we'll show how to connect several common gaming consoles to the AirStation wirelessly.

Connecting Your Nintendo DS®

The DS® uses separate wireless connections for each game. You will need to do these steps for each game that you play wirelessly.

Turn on your DS®. Click on *Wi-Fi Settings*. The location of this may vary depending on what game you're in.

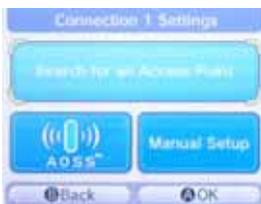

Click on *Nintendo Wi-Fi Connection Settings*.

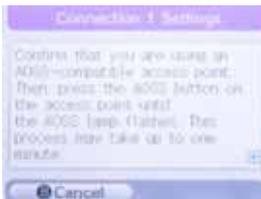

Click on any of the 3 available connections.

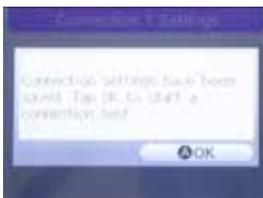

Connecting Your Nintendo DS®

Click on AOSS.

You'll see this screen. Now, click the AOSS button on your desktop (see page 13).

Your DS® is now connected to the network. Click *OK* to run a connection test.

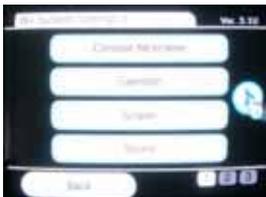

Connecting Your Nintendo Wii®

Turn on your Wii®. Click on *Wii Options*, in the bottom left corner of the main menu.

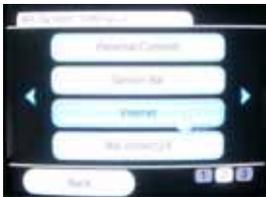

Click on *Wii Settings*.

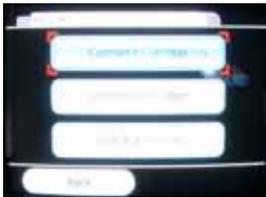

Click on the right arrow for more options.

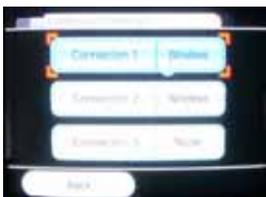

Connecting Your Nintendo Wii®

Click on *Internet*.

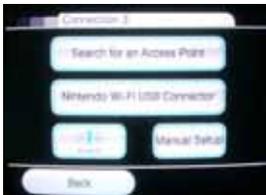

Click on *Connection Settings*.

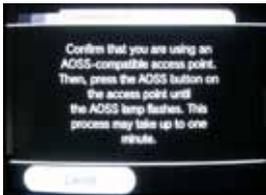

Click on any of the three available connections. If the connection you're using has settings already saved, clear them.

Connecting Your Nintendo Wii®

Click on *AOSS*.

When you see this screen, click the *AOSS* button on your PC's desktop (page 13 for more info).

Your Wii® is now connected to the network. Click *OK* to run a connection test.

Connecting Your Sony PSP®

Turn on your PSP®.

PSP firmware version 2.0 or later is required to use AOSS. Update your PSP firmware if necessary.

Select *Network Settings*.

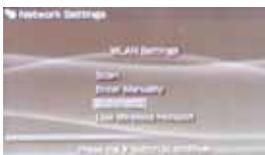

Connecting Your Sony PSP®

Choose *Infrastructure Mode*.

Choose *New Connection*.

Choose *Automatic*.

Select *AOSS*. Click the AOSS button on your PC's desktop (see page 13 for more info).

In about a minute, the devices will form a secure connection.

Connecting Your Sony Playstation 3®

Turn on your Playstation 3®, without a game inserted and navigate to *Network Settings*.

Open *Internet Connection Settings*.

Select *Yes* to continue.

Connecting Your Sony Playstation 3®

Choose *Wireless*.

Choose *Automatic*.

Press the "X" button on your controller to initiate AOSS. Then, click the AOSS button on your PC's desktop (page 13 for more info on this).

In about a minute, the devices will form a secure connection.

Specifications

Standards Compliance:	IEEE802.11g/IEEE802.11b
Access Modes:	Infrastructure (Client Mode/AP Mode) Ad-hoc (Client Mode)
Communication Protocol:	OFDM, DSSS, CCK
Frequency Range:	2.412 - 2.464MHz (Channels 1 - 11)
Security:	WPA-PSK (TKIP,AES), WPA2-PSK (TKIP, AES)*, 128/64-bit WEP *Software Access Point mode does not support WPA2-PSK.
Interface:	USB 2.0
Dimensions:	2.9" x 0.8" x 0.4" (74 x 21 x 10 mm)
Weight:	~0.7 ounces (20 grams)
Operating Environment:	32° - 95° F; 20-80% non-condensing
OS Support:	Windows® XP, Windows® Vista

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by

one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

FCC RF Radiation Exposure Statement:□□

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

End users must follow the specific operating instructions for satisfying RF exposure compliance.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.□□

Caution Exposure to radio frequency radiation (below is for portable device)

To comply with FCC RF exposure compliance requirements, this device must not be colocated or operating in conjunction with any other antenna or transmitter.

b. Industry Canada Portion

Canada Regulatory Compliance Statement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

For Customers in Canada

This device complies with RSS 210 of Industry Canada (IC).

Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L' utilisation de ce dispositif est autorisée seulement aux conditions suivantes :

- (1) il ne doit pas produire de brouillage et
- (2) l' utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

Caution: Within the 5.15-to-5.25-GHz band, UNII devices are restricted to indoor operations to reduce any potential for harmful interference to co-channel Mobile Satellite Systems (MSS) operations
Exposure to radio frequency radiation (below statement applied to mobile or portable device)
The installer of this radio equipment must ensure that the antenna is located or pointed such that it does not emit RF field in excess of Health Canada limits for the general population;
consult Safety Code 6, obtainable from Health Canada's website at www.hc-sc.gc.ca/rpb.

c. EU Portion

European Community Declaration of Conformity with Regard to the R&TTE Directive
1999/5/EC

The following standards were applied: (Omni)

- Radio: EN 300-328 v1.7.1 (2.4-GHz operation)
- EMC: EN 301.489-1 v1.6.1, EN 301.489-17 v1.2.1
- Safety: IEC 60950 (1999 3rd Edition with Amend. 1,2,3,4) , EN 60950-1 (2006) ,
EN 50371 (V. 2002)

The following CE mark is affixed to the device:

Note: This equipment is intended to be used in all EU and EFTA countries. Outdoor use may be restricted to certain frequencies and/or may require a license for operation. For more details, contact your customer service representative.

To comply with RF exposure compliance requirements, a separation distance of at least 20 cm must be maintained between the antenna of this device and all persons. This device must not be co-located or operating in conjunction with any other antenna or transmitter.

Member States shall ensure that the manufacturer or the person responsible for placing the apparatus on the market provides information for the user on the intended use of the apparatus, together with the declaration of conformity to the essential requirements. Where it concerns radio equipment, such information shall be sufficient to identify on the packaging and the instructions for use of the apparatus the Member States or the geographical area within a Member State where the equipment is intended to be used and shall alert the user by the marking on the apparatus referred to in Annex VII, paragraph 5, to potential restrictions or requirements for authorization of use of the radio equipment in certain Member States.

Buffalo declares that WLI-UC-G (FCC ID: FDI-04600087-0) is limited in CH1~CH11 for 2.4GHz by specified firmware controlled in U.S.A.
