Button	Description
WPS/RSST	Press or hold for about 5 seconds and then release it. LED indicator will start to blink and a message "WPS Successful" will appear.

Tip:

- 1. To configure your router, connect your PC to the router either via LAN or Ethernet cable.
- 2. If you are unable to connect to the router, please check the following:
 - Check the WAN access is provided or changed, devices are required to connect with WAN access through.

2 Configure Your Router

1. Open a web browser, set IE, Edge, Firefox, Chrome in the address bar, and fill in the router's IP address.

2. If you use the router for the first time or after you reset the router, the router will automatically detect your internet connection type.

You can manually select the internet type by configuring the internet settings. Besides, the following table may help you understand your internet connection type and configure it accordingly.

Internet Connection Type	Features	Instructions
PPPoE	If you can access the internet only after setting up a dial-up connection on the computer using a user name and password provided by your ISP, select PPPoE .	Select PPPoE , type the PPPoE user name and password provided by your ISP, customize a WiFi name and password to secure your wireless network, and click OK .
Dynamic IP	If you can access the internet without setting any parameters on your computer, select Dynamic IP .	Select Dynamic IP , customize a WiFi name and password to secure your wireless network, and click OK .
Static IP	If you can access the internet only after setting static IP address and other related information on your computer, select Static IP .	Select Static IP , type the static IP address and related information provided by your ISP, customize a WiFi name and password to secure your wireless network, and click OK .

—End. You can now try accessing the internet.

FAQs

Q1: Where should I place my wireless router for optimum performance?

A1: For optimum performance, place your device:

- near the center of the area where your computers, smart phones and other devices operate, and preferably within line of sight to your wireless devices.
- in an elevated location such as high shelf, keeping the router's vents and outlets to a minimum between the router and other items such as computers and smart phones.
- away from power sources such as electrical sources of interference, such as ceiling fans, home security systems, or microwaves.
- away from any large metal surfaces, such as a steel metal door or aluminum walls.
- away from other materials such as glass, insulated walls, fan coils, mirrors, brick, and concrete that can also affect your wireless signal.

Q4: I forgot my login password, what should I do?

A4: Restore the wireless router to factory default settings.
Restore Method: Press and hold the **WPS/RSST** button for about 5 seconds and then release it.

CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

NOTE: (1) The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. (2) To avoid unnecessary radio interference, it is recommended to use a shielded RJ45 cable.

CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

NOTE: (1) The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. (2) To avoid unnecessary radio interference, it is recommended to use a shielded RJ45 cable.

FCI Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) the device must accept any interference received, including interference that may cause unintended operation.

The equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the equipment does cause harmful interference to you or other equipment, you may be required to take additional measures to correct the interference. You are encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. The transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Radiation Exposure Statement:

The equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

NOTE: (1) The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. (2) To avoid unnecessary radio interference, it is recommended to use a shielded RJ45 cable.
