Chapter 1 Introduction

Thank you for purchasing JCG 11N series WLAN router, which integrates the router, switch, wireless access point with the firewall and adopts the most advanced MIMO (multiple input multiple output) technology to increase the wireless transmission rate over 3 times of the initial 802.11g standard. It supports 64/128-bit WEP encryption and the advanced encryption and security features like WPA and WPA2. With the WPS encryption function, you can easily set up the secure wireless network environment. And with the provided setup guide, you can easily set up the router, remotely access and manage the router anytime anywhere via the Internet. JCG 11N series WLAN router is a series of cost-effective products specially designed for small-size enterprises, families and student's dormitory to meet their needs for wireless Internet access. It's the best choice for you to enjoy the wireless Internet access and the fun from wireless connectivity.

JCG 11N series WLAN router is simple to set up, which can be installed and set up using the operation manual without professional assistance. Before you are ready to install and use this product, please read the manual carefully for better understanding and use of the full functionalities of this product.

1.1 Purpose and Definitions

This manual is used to help you familiarize with the JCG 11N series WLAN router and use it properly. To avoid ambiguity, we define the terms used in this manual as follows:

STA: wireless client/station, refers to wireless client devices, such as laptop, mobile phone and tablet PC etc.

Client: wired or wireless client, including but not limited to computer, laptop, mobile phone and tablet PC etc.

Chapter II Hardware Installation

2.1 Panel and Interfaces

JHR-N916R/N926R/N926R+

1.Power LED

Off: powered off

On: powered on

2.Wireless status LED

Off: wireless radio off

On: wireless radio on

Blinking: wireless data transmitting

3.Security LED

Off: wireless network unsecured

On: wireless network secured

Blinking:Firmware Upgrading

4.LAN status LED

Off: LAN port unconnected

On: LAN port connected

Blinking: LAN data transmitting

5.WAN status indicator

Off: WAN port unconnected

On: WAN port connected

Blinking: WAN data transmitting

6.LED digital display

Digital display of online hosts

7.Power jack (DC IN)

Connect to power adapter

8.WAN (Internet) port

WAN port

9.LAN 1-4 ports

LAN ports

10.WLAN (wireless) button

1) Switch on/off the wireless network

2) Wireless radio power regulation (available on JHR-N926R/N926R+ only)

11.RST/WPS button

When the router is working, press this button for 1 second to start WPS progress; press this button for more than 5 seconds to restore to factory settings.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
