 • Why do I need to register my appliance and how do I do it? 24

 Internet Access..... 25

 • Is it mandatory to create a user in NetGenie in order to access Internet? 25

 • How can I access and configure my NetGenie appliance?..... 25

 • I want to apply different levels of Internet restrictions to different users as per their role and requirement in my organization, how can I do so? 25

 • Will all of the organization employees receive authentication page every time they try to access Internet through NetGenie? 26

 • Do I need to manually add each website, which I want to be allowed for my employees? 26

 • How can I customize Website category access for a specific user?..... 26

 • I want to allow my employees accessing game sites after office hours. What should I do? 28

 • How can I apply time-based Internet access? 28

 • I'm receiving "Blocked Website" message when I try to access www.google.com through NetGenie. Is there any way one can allow access to the blocked website(s) from the authentication page?..... 29

 • I want to know the categorization for a Website. Is there any way to know the same using NetGenie? 30

 • I want to allow only Yahoo Messenger to my employee 'A', that too in the evening between 6 to 9. I also want to block any other chat messengers, what should I do?..... 31

 • I am not able to access the Internet using my smartphone, why? 33

 • I want to allow or block some websites for all users; do I need to individually configure this setting for each and every user? 34

 • Is there any way to allow/block websites globally? 34

 • Does NetGenie allow access to uncategorized websites? 34

 • How can I block the websites, which are not categorized by NetGenie? 34

 • What if one of my employees forgets their password? 35

 • I am a traveler and use USB modem to get Internet access; can NetGenie ensure me safe Internet? 35

 • My ISP has given me an IP address, where do I need to specify the same in NetGenie? 35

 Device Whitelisting 36

 • How do I make sure that every time I login using my laptop, I do not have to see the authentication page?..... 36

 • I do not want to authenticate every time I try to access the Internet using NetGenie. What should I do? 36

System.....	37
• How do I change my NetGenie administrator password?.....	37
• How can I view system and security status of my NetGenie Appliance?.....	37
Networking.....	38
• How many computers or devices can be connected wirelessly to NetGenie at the same time?.....	38
• Internet access through my NetGenie appliance has stopped. What should I do?	38
• How do I know that my NetGenie is having Internet connection?.....	38
• How can I verify that my NetGenie appliance is Wi-Fi enabled?	38
• How can I wirelessly connect my laptop to NetGenie?	39
• Can I insert my telephone cable directly to my NetGenie appliance to access Internet?39	
• I do not want others to see my network due to security reasons. Is there any way to hide visibility of my network to wireless users?	39
• Can I change the name of my Network?.....	40
Security.....	41
• Does NetGenie protect my network from viruses and other malicious software?	41
• I want to protect my network from viruses. What should I do?	41
• What is the frequency of malware signature updates? Can I customize it?	41
• Can I manually update malware signature database?	42
• How can I upgrade my NetGenie appliance with malware signature updates if I am not connected to Internet?	42
Upgrade, Back-up, Restore.....	43
• How can I check availability of upgrade(s) available for my NetGenie appliance?.....	43
• Can I apply downloaded firmware upgrade(s) to my NetGenie appliance?.....	43
• Can I save my current NetGenie configuration for future use i.e. in case of system crash or change in settings?.....	43
• My system is crashed but I do have configuration back-up I took a few days back. What should I do to restore my NetGenie settings:.....	44
• How to restore configuration back-up in NetGenie appliance?.....	44
• How can I restore Factory Default Configuration?	45
• How many configuration snapshots can I store on NetGenie appliance?	45
Logs and Reports	46
• I want to find out which websites are being accessed by my employees in my absence. How can I check it?	46
• From where can I see overall Internet traffic passing through my NetGenie appliance?47	
• I want to find out which applications are being accessed by my employees in my absence. How can I do so?.....	47
• From where can I view details of viruses detected by NetGenie?	48
• Can I have visibility of users who are accessing Internet through NetGenie?	48
• How can I view details of Intrusion attempts detected by NetGenie?	49
• I have set time as per my local time zone but why is NetGenie still not showing it?	51
• Can I send NetGenie logs to third party server?	51
• Is there any way to turn off NetGenie's logging feature?	52
Some Advanced Configuration.....	52
• Does NetGenie prevent my network from Web as well email-based viruses? What happens when NetGenie encounters any Virus?	52
• I do not want NetGenie to scan MS-Word documents for viruses, is it possible?	53
• What does NetGenie offer under Intrusion Prevention System?	54
• Can I customize NetGenie's intrusion prevention signatures?	55
• What is Port Forwarding? How can I configure port forwarding in NetGenie?	56
• Can I access NetGenie over Internet?	57
• Is there any single page from where I can get the complete network overview?	58
• I want to change the default IP address of my NetGenie appliance, can I do it?	59
• Why do I need to clone the MAC address of my router?	59
• I want to allow all TCP traffic passing through port 80, can I do so?	60

- I have set up a small network at office. I use NetGenie to surf the Internet using my laptop while I am keeping one game server behind a router, which is connected, to NetGenie. Now if I want to access the game server using my laptop, how can it be done? 61
- I wish to configure VPN in NetGenie, how can I do that? 63

Menu Structure 65

Preface

Welcome to Cyberoam NetGenie SOHO User Guide.

Intended Audience

This guide is intended for small and home office users with basic Internet knowledge.

Guide Organization

This guide gives you information about the administration of Cyberoam NetGenie Secure Internet appliance while helping you manage and customize NetGenie to meet your personalized Internet safety requirements.

This guide is organized in three parts:

Part 1 – Deploy your NetGenie

Part 2 – Protect your Organization

Part 3 – What can NetGenie do for you

Typographic Conventions

All contents in this guide including text or screenshots follow the given list of conventions

Item	Convention	Example
Part titles	Bold and shaded font typeface	Internet Controls
Topic titles	Shaded font typeface	Introduction
Subtitles	Bold & Black typeface	Notation conventions
Navigation link	Normal typeface	Internet Controls → Device Whitelisting it means, to open the required page click on Internet Controls then on Device Whitelisting
Notes and Prerequisites	Bold typeface between black borders	Note

Part 1: Deploy your NetGenie

Introduction

NetGenie works as a wireless Unified Threat Management (UTM) appliance for Small Offices, Home Offices. It creates a Wi-Fi zone along with the benefits of Stateful Inspection Firewall, VPN, Anti-Virus, Intrusion Prevention System, 3G Ready and Internet Controls over websites and applications – all this in your Wireless Router! Share Internet connection with your office users over desktops, laptops, handheld devices like iPad, iPhone and more –at the same time!

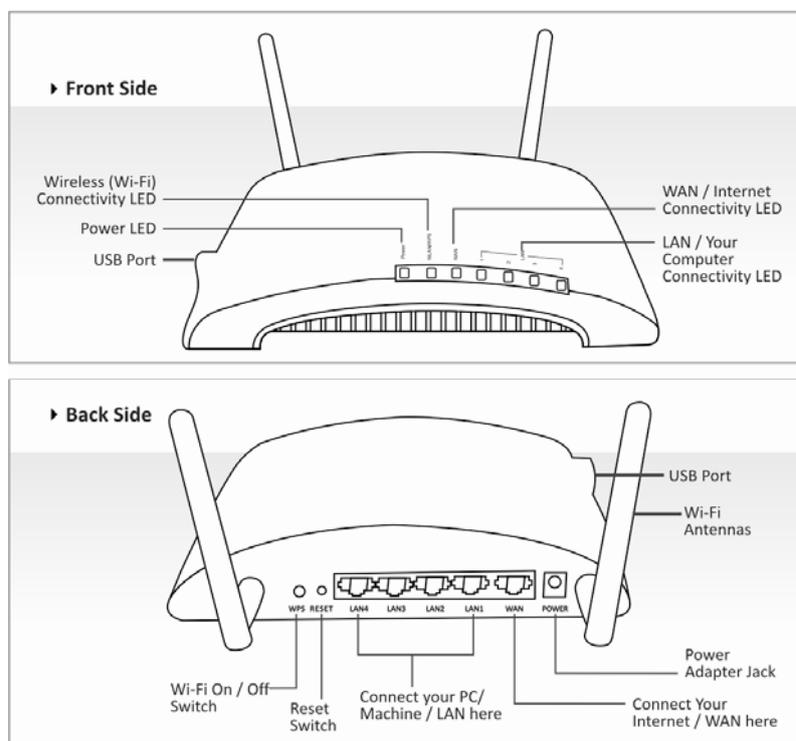

NetGenie's pre-configured security settings offer protection from unauthorized outsiders. Protect all devices used to connect to the Internet – laptops, desktops, iPhone, iPad, and more – from virus and hackers. Control user access to harmful and unproductive websites and applications like adult sites, job portals, sports sites Facebook, Skype, Yahoo Messenger and more to enhance security and productivity in your office.

After unboxing your NetGenie, ensure that you have all these components available:

1. One (1) NetGenie Wireless Base Unit - NG11EO
2. Two (2) detachable Wi-Fi Antennas
3. One (1) RJ-45 Ethernet Cable
4. One (1) Power Adapter
5. Quick Start Guide

Please immediately contact your vendor if you find anything missing.

Know your NetGenie

Defaults

- Default IP address to access NetGenie: http://10.1.1.1
- Default Username: admin
- Default Password: admin

Appliance Reset Button: To reset appliance to factory default settings, keep the reset button pressed for 5 seconds. While doing so, all past upgrades and configurations will be lost.

Surf using NetGenie

Prerequisites:

1. Internet connectivity through a DSL/Cable modem/Direct Internet Cable with RJ45 (Ethernet) connection or USB Modem.
2. At least one computer with an installed network interface adapter/wireless network adapter.
3. Internet browser.

Getting your NetGenie Ready

1. Before you begin surfing the Internet through NetGenie, you first need to assemble the appliance.
2. Screw in detachable Wi-Fi antennas in their respective jacks provided in the back panel.
3. Look out for a sticker at the bottom of the appliance containing the default wireless network name, technically known as SSID and a pass key specific for your appliance.
4. Plug one end of the power adapter into the socket on the back of the NetGenie Base Unit.
5. Plug the other end of the power adapter into the nearest main socket.
6. Before you access the Internet through NetGenie, make sure the power is switched on. The Power LED on the front panel should turn green.

Note:

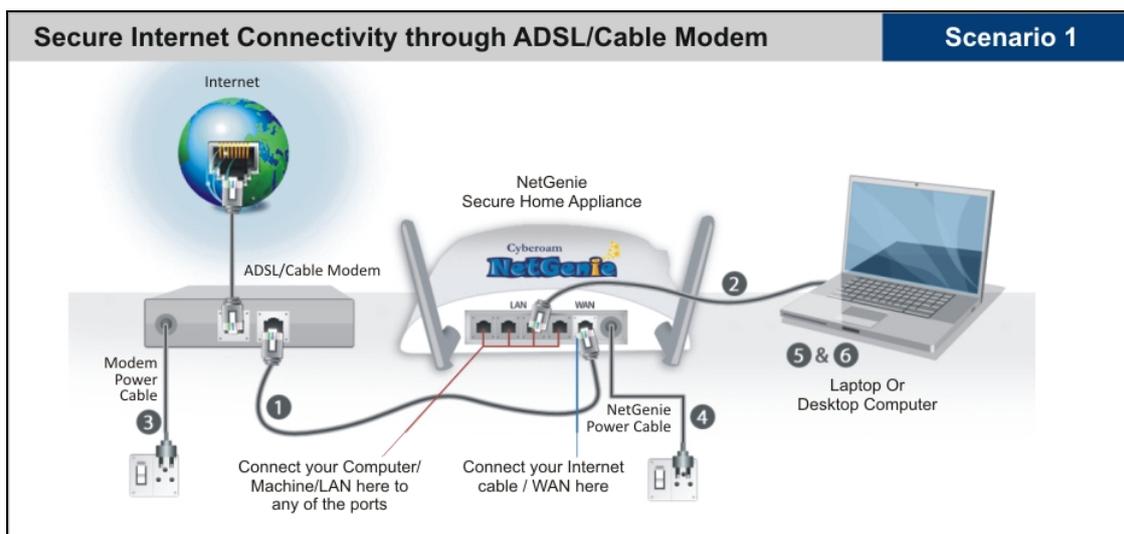

SSID and pass key pre-secure your wireless network from any unauthorized access attempts. Please note down your pass key for future reference.

Identify your Office Internet Setup

Depending on your office network set-up, you can connect NetGenie to the Internet by referring to any of the following scenarios:

1. [Through ADSL Cable Modem](#)
2. [Through Direct Cable](#)
3. [Through USB Modem](#)
4. [Over Wi-Fi](#)

Wired Connection - Secure Internet Connectivity through ADSL/Cable Modem

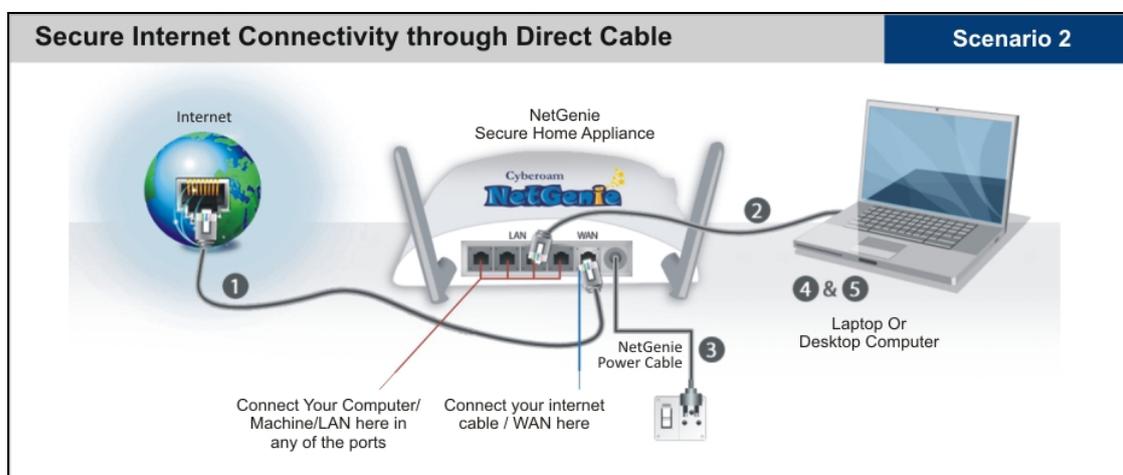

1. Unplug the cable that connects the ADSL Router/Cable Modem to your computer and plug it into the “WAN” NetGenie socket.
2. Use the RJ-45 Ethernet cable provided with the NetGenie appliance to connect your computer to any of the “LAN” NetGenie sockets.
3. Switch on your ADSL Modem/Cable Modem and wait till it connects to the Internet. The Internet LED on the ADSL modem will turn green and remain steady. If you are dialing the Internet from your computer, refer to the [Configuring PPPoE](#) section.
4. Switch on the NetGenie appliance. Wait till the “Power” LED and “WAN” LED turns green.
5. Switch on your computer now. NetGenie's “LAN” LED will turn green and remain steady.
6. Open your browser and start surfing the Internet. Your computer is now secured from online threats and malware with the Quick Security feature automatically turned on.

Note:

To configure role-appropriate Internet access for your employees, refer the [Internet Controls](#) section.

If you are unable to connect to the Internet after following above procedure, please revert to your original setup and visit Cyberoam’s support section at www.netgenie.net.

Wired Connection - Secure Internet Connectivity through Direct Cable

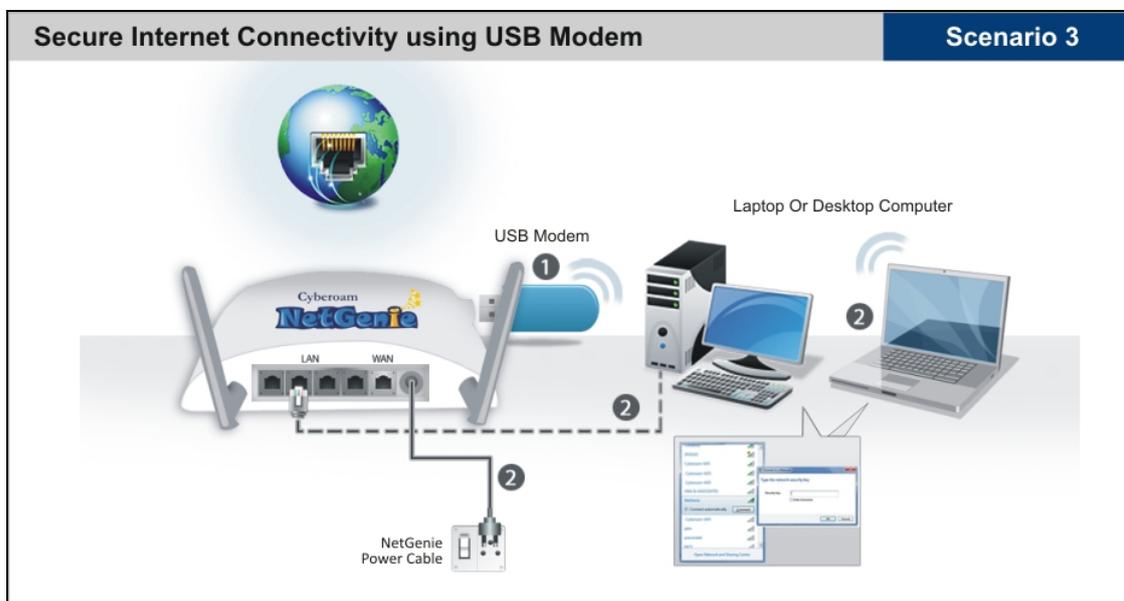

1. Unplug the Internet cable that connects to your computer and plug it into the “WAN” NetGenie socket.
2. Use the RJ-45 Ethernet cable provided with the NetGenie appliance to connect your computer to any of the “LAN” NetGenie sockets.
3. Switch on your NetGenie appliance. Wait till the “Power” LED and “WAN” LED turns green.
4. Switch on your computer now. NetGenie's “LAN” LED will turn green and remain steady.
5. Open your browser and start surfing the Internet. Your computer is now secured from online threats and malware with the Quick Security feature automatically turned on.

Note:

To configure role-appropriate Internet access for your employees, refer the [Internet Controls](#) section.

If you are unable to connect to the Internet after following above procedure, please revert to your original setup and visit Cyberoam's support section at www.netgenie.net.

Wireless Connection - Secure Internet Connectivity using USB Modem

1. Plug a USB modem in the slot provided in the NetGenie appliance.
2. Use the RJ-45 Ethernet cable provided with the NetGenie appliance to connect your computer to any of the “LAN” NetGenie sockets and switch on the NetGenie appliance.

OR

Switch on the NetGenie appliance. If you are connecting to the Internet over Wi-Fi, start your laptop. Make sure your Wireless Network Adapter is enabled. Your laptop will automatically select the wireless network (also called SSID) named “NetGenie”.

3. Click the network icon in your machine's system tray (bottom-right of your screen) and Select “NetGenie”.
4. After selecting “NetGenie”, you will be asked to enter the exact Security/Pass Key printed on the sticker at the bottom of your appliance. This will connect you to the NetGenie appliance over Wi-Fi.
5. Enter the IP address: <http://10.1.1.1> in the address bar and access NetGenie using your administrator credentials.
6. Go to **Network Settings** → **Internet**.
7. Select USB Modem and fill up the required details. Once the valid details are entered and configurations are applied, NetGenie will automatically connect to the Internet.

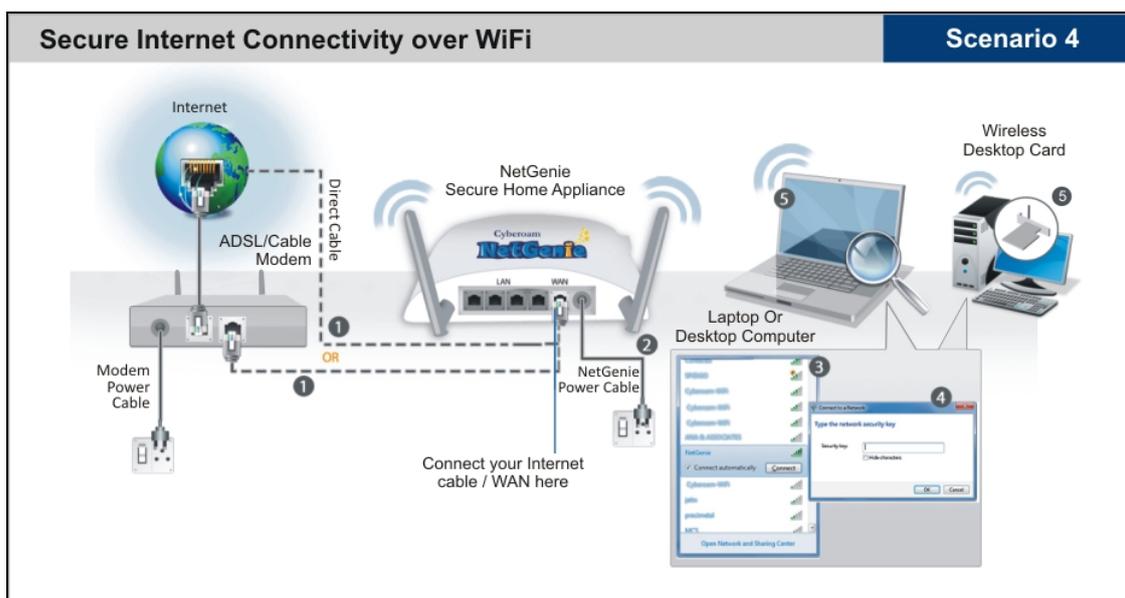

- Open your browser and start surfing the Internet. Your computer is now secured from online threats and malware with the Quick Security feature automatically turned on.

Note:

To configure role-appropriate Internet access for your employees, refer the [Internet Controls](#) section.

If you are unable to connect to the Internet after following above procedure, please revert to your original setup and visit Cyberoam's support section at www.netgenie.net.

Wireless Connection - Secure Internet Connectivity over Wi-Fi

- Use the cable that comes with your NetGenie appliance to connect it to the ADSL Router/Cable Modem.
- Insert one end of the cable in the "WAN" NetGenie socket and the other end in your modem "LAN". In case of Direct Cable Internet, please connect it straight to the NetGenie "WAN" socket. If you are dialing the Internet from your computer, refer to the [Configuring PPPoE](#) section.
- Switch on your NetGenie appliance. Wait till the "Power" LED and "WAN" LED turns green and for the "WLAN/WPS" LED to turn green and stabilize.
- Start your laptop. Make sure that your Wireless Network Adapter has been enabled. Your laptop will automatically detect the wireless network (also called SSID) named "NetGenie".
- Click the network icon in your machine's system tray (bottom-right of your screen) and select "NetGenie".
- After selecting "NetGenie", you will be asked to enter the exact Security/Pass Key printed on the sticker at the bottom of your appliance. This will connect you to the NetGenie appliance over Wi-Fi.
- Open your browser and start surfing the Internet. Your computer is now secured from online threats and malware with the Quick Security feature automatically turned on.

Note:

Please turn off your router's Wi-Fi, to avoid any security breaches.

Configuring PPPoE

PPPoE (Point-to-Point Protocol over Ethernet) is used when you dial up to connect to the Internet

through a broadband connection. This section is only relevant to you if need to dial up the Internet from your machine.

(You will need your Username and Password for connecting to the Internet. Please contact your ISP if you have lost them.)

Go to **Network Settings** → **Internet**, select Internet connection type as PPPoE and fill up the required details.

Confirm Password	Confirm the password.
Redial Period	Specify the time after which redialing should be attempted.
Idle Time	Specify idle time. Connection will drop after the configured inactivity time and the user will be forced to re-login.

MTU	Specify MTU value (Maximum Transmission Unit) MTU is the largest physical packet size in bytes that can be transmitted in a network. This parameter becomes an issue when networks are interconnected and have different MTU sizes. Any packets larger than the MTU value are divided (fragmented) into smaller packets before being sent over. Default - 1492 Input range - 568 to 1492
Static IP	Select the checkbox to bind a static IP address with the NetGenie appliance.
IP Address	Specify IP address.
Network Mask	Specify network mask.
DNS Server Configuration	
Static DNS Server	Select the checkbox to configure static DNS server.
Primary	Specify IP address of primary DNS server.
Secondary	Specify IP address of secondary DNS server.
MAC Address Clone	Enable this to create a clone of your router's IP address.
MAC Address	Specify MAC address of your router to be cloned.

Access Internet

Congratulations!!! If you are reading this, it means you have installed NetGenie successfully. Now simply open a new browser window and enter any website URL, you want to visit in the address bar.

Enjoy safe surfing with NetGenie.

Part 2: Internet Controls

This section describes how to access and configure NetGenie security features to ensure threat free Web surfing for your entire organization. It contains the following sub-sections:

- [Access NetGenie](#)
- [Register NetGenie](#)
- [Set System Time](#)
- [Add User](#)
- [User Internet Access](#)

Access NetGenie

After successful deployment, NetGenie needs to be configured to enable Internet controls.

Enter the IP address <http://10.1.1.1> in address bar and log in using default username 'admin' and password 'admin'.

Screen –Login

Screen Elements	Description
Username	Specify user login name. If you are logging in for the first time after deployment, please use default username 'admin'.
Password	Specify password. If you are logging in for the first time after deployment, please use default password 'admin'.
Log in button	Click to login into NetGenie

Table – Login screen elements

Note:

It is recommended to change admin password of NetGenie as soon as you log in. This is a preventive measure to avoid unauthorized use of NetGenie.

Log out procedure

To avoid unauthorized users from accessing NetGenie, log out after you have finished working. This will end your session and mark your exit from NetGenie.

Set System Time

You need to update your local time zone in order to prepare time schedules for accessing the Internet and generating time-based reports.

Go to **System** → **Time** to update your time zone.

Screen – System Time Settings

Screen Elements	Description
System Time	Displays NetGenie’s current time
Select Time Zone	Selects local time zone from drop down menu
Enable NTP Client	Checks to enable NTP (Network Client Protocol) client
Sync Now	Clicks to synchronize system time with configured NTP server
NTP Server 1,2,3,4 and Port	Displays NTP server’s domain name and port if NTP client is enabled
Synchronization Interval	Displays time interval in seconds to synchronize with NTP server
Manually Configure Date and Time	You can manually set system date and time if you do not want to use NTP clients. Specifies date and time in yyyy/mm/dd format and hh:mm:ss format respectively

Table – System Time Settings screen elements

Add User

You need to add your organization users in order to give role and requirement appropriate Internet access to them.

Go to **Internet Controls** → **Add User**.

Screen – Add User

Screen Elements	Description
Username	Specify the name of the individual for whom you wish to customize Internet access.
Password	Specify a password. Re-enter your password in the Confirm Password field.
Image icon	Click to change the picture for a user
Internet Restriction Slider bar	<p>Drag the slider bar to reflect the appropriate Internet control for any of your organization user. This selection will block any websites and applications deemed inappropriate for them.</p> <p>Available options: List Only Strict Moderate Minimal Safe Surfing</p>
Website List	Click to allow or block any specific website(s) for the user.
Website Category List	Click to view and customize access to specific web categories for the user.
Application List	Click to view and customize access to specific applications for the user.
Enable Internet Activity Reporting	Click to log and report Internet activities for a user.
Apply	Click to save the changes.

Tips	Displays help text to configure the user settings.
------	----------------------------------------------------

Table – System Time Settings screen elements

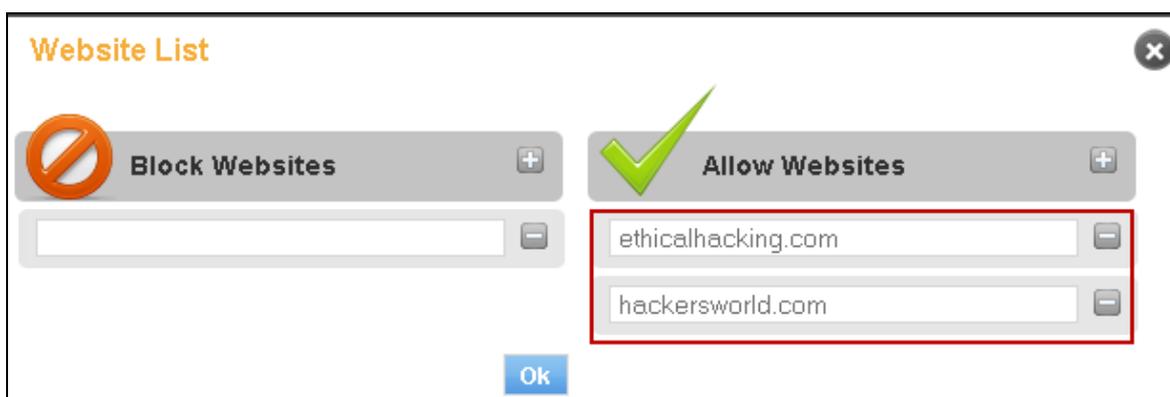

Website List

Enter one or more websites to be allowed or blocked for the user and click **OK** to save the changes.

This section is used to customize NetGenie Web protection for the specific user.

E.g.

Your IT administrator shows interest in visiting a particular computer security forum, which is blocked as per the Internet access settings. You can override these settings to allow access to that particular website using Website List.

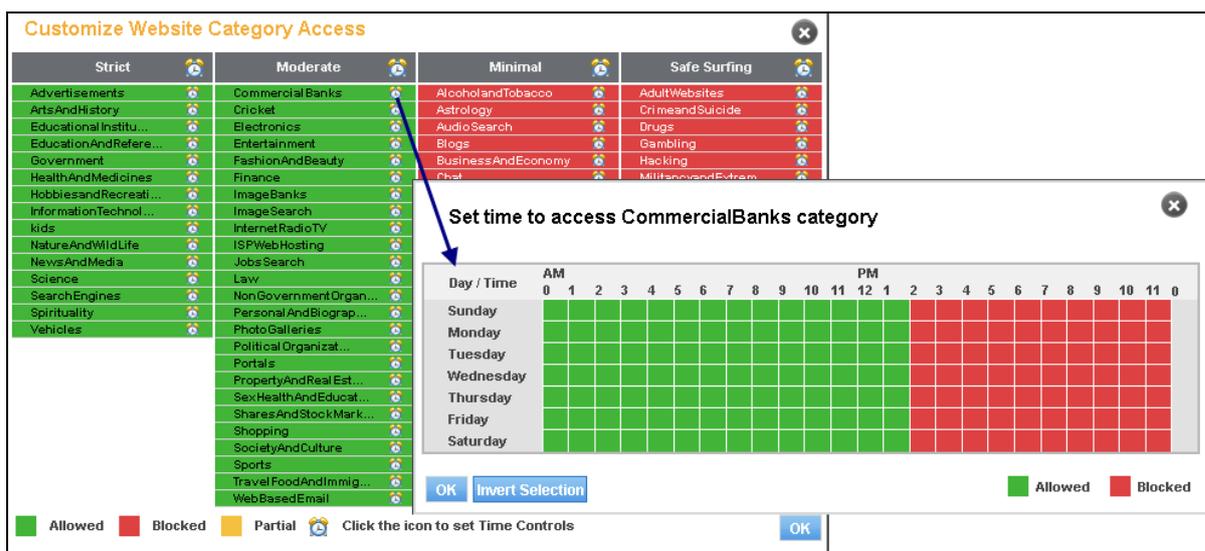

Screen – Website List

Website Category List

As and when the need arises, you can customize the list of websites allowed and denied to a specific user.

For this, click Website Category List icon to view, allow or block a specific website category.

You can also use this page to configure schedule-based Website category access.

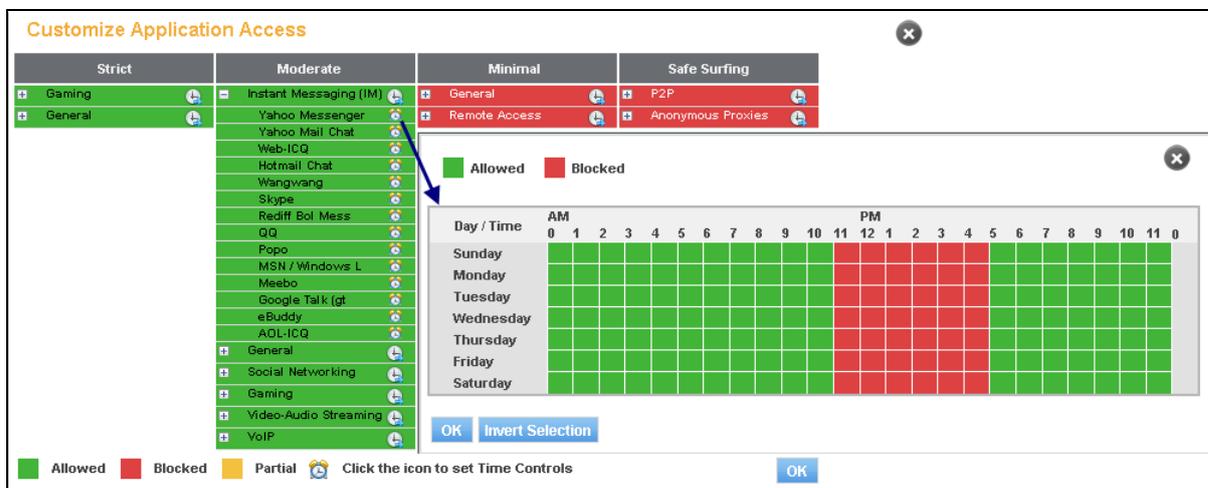

Screen – Website Category List

Application List

As and when required, you can customize the list of applications allowed and denied to a specific user.

For this, click Application List icon to view, allow or block a specific application category. Expand the application tree to allow or block any specific application. You can also use this page to configure schedule-based application or application category access.

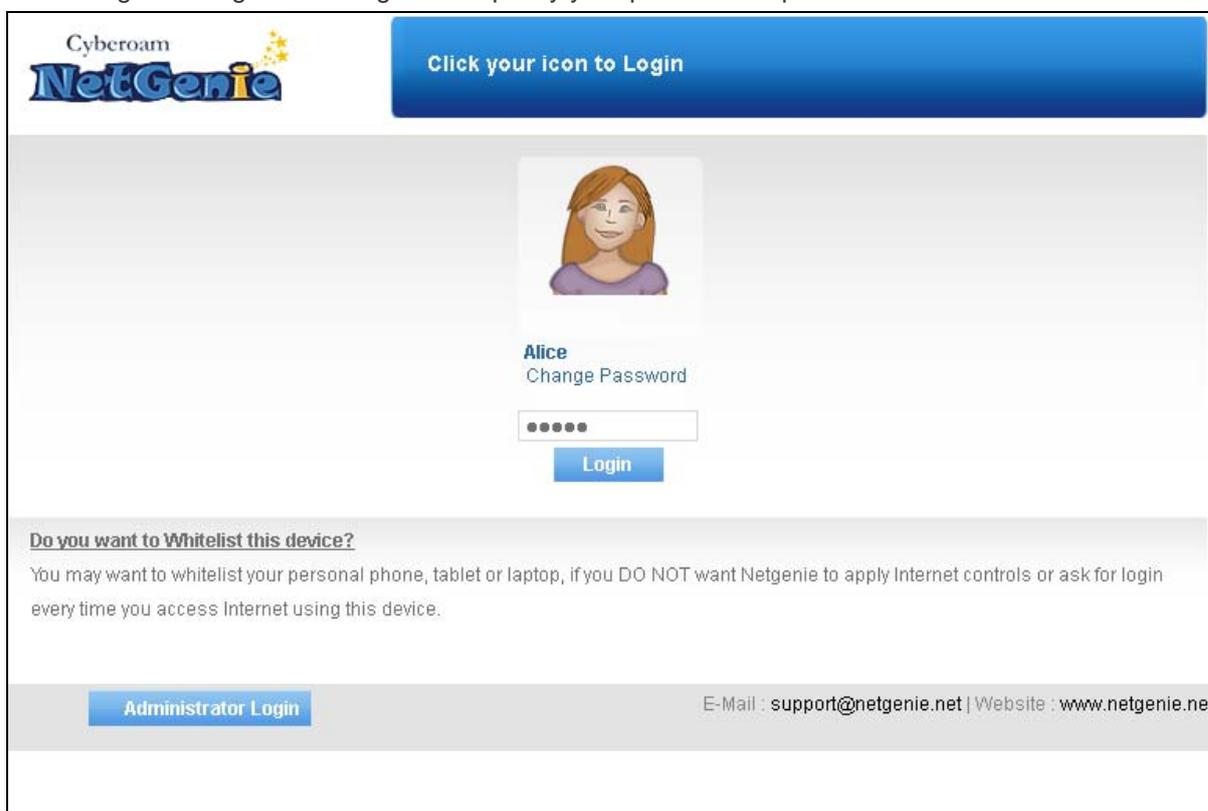

Screen – Application List

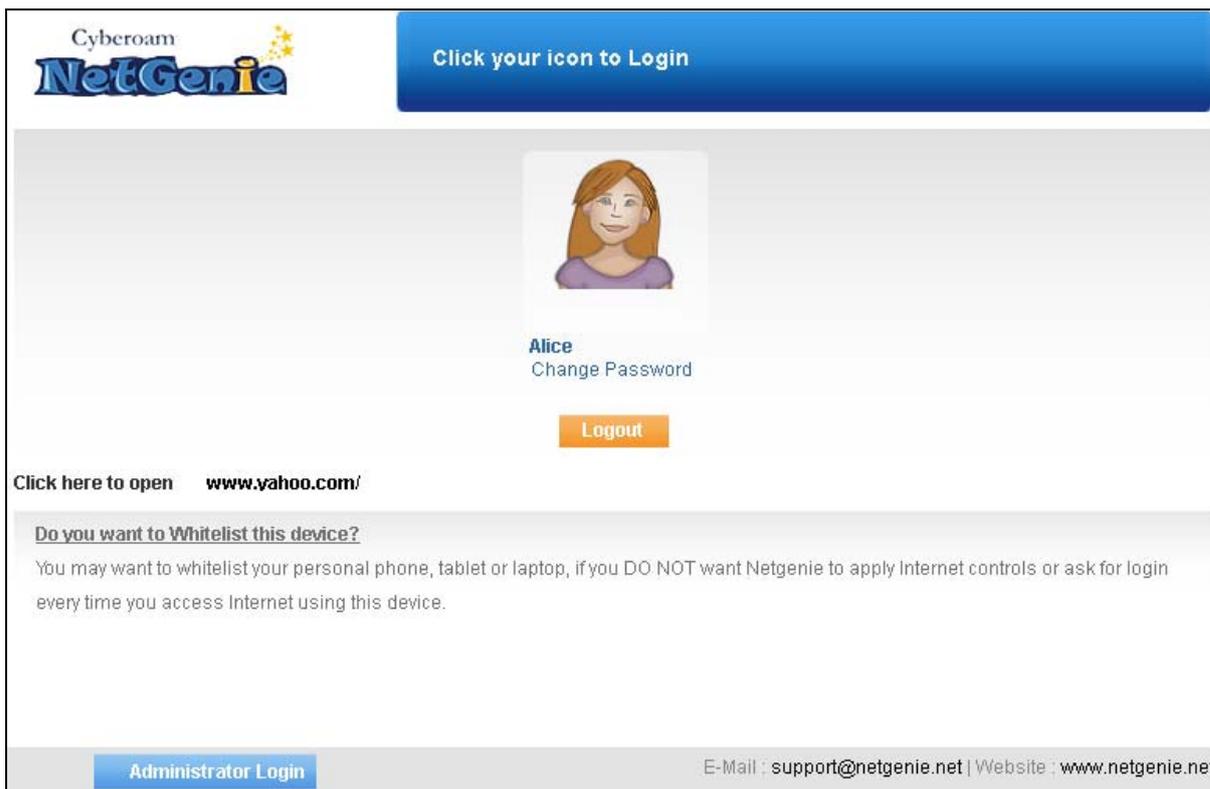

User Internet Access

Open a new browser window and enter any website URL in the address bar. It will lead to an authentication screen.

Click the given image icon to log in and specify your password to proceed further.

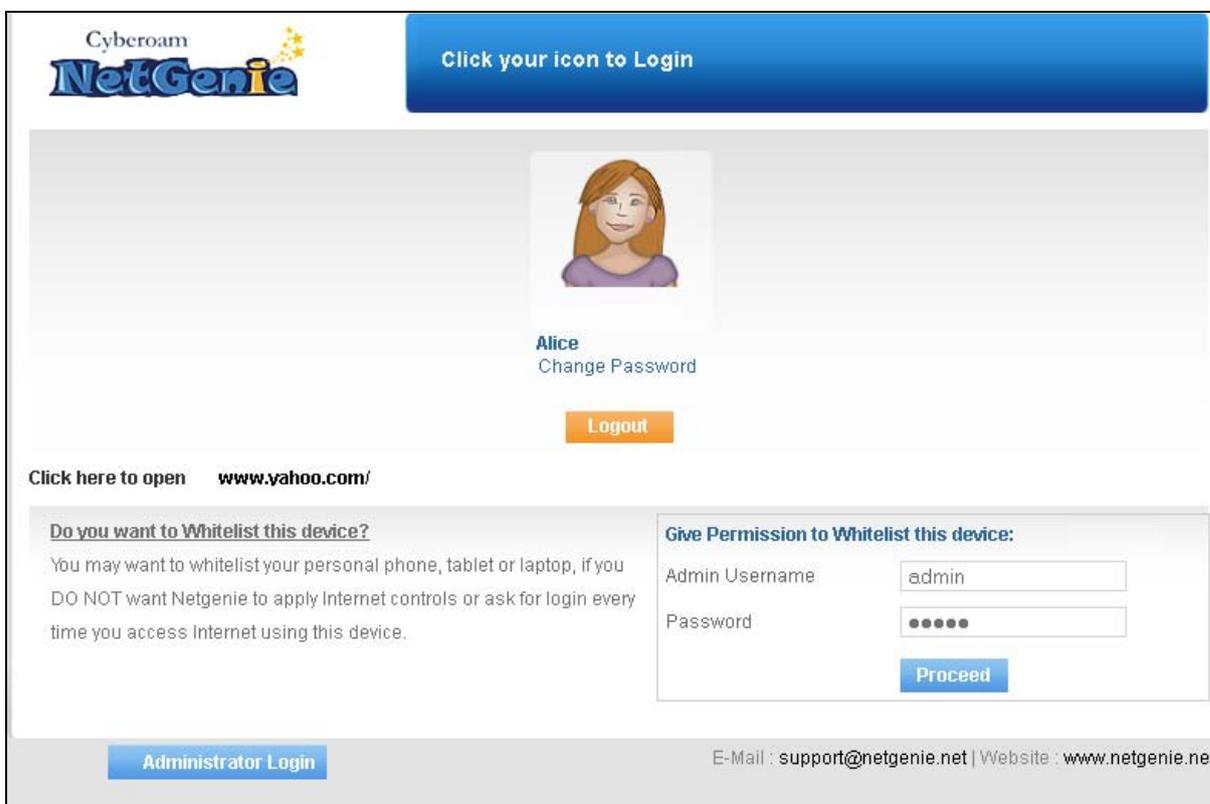

Screen – User Login

Screen – Successful User Login

Click the link Do you want to Whitelist this device? if you do not want NetGenie to apply parental controls or ask for login every time you access Internet using this device.

Provide your NetGenie administrator credentials and click Proceed to Whitelist the device.

Screen – Device Whitelist

Note:

Administrator credentials are required to Whitelist the device.

Device whitelisted successfully!

Device "mapal " with MAC address: "00:19:D1:96:59:28" has been whitelisted.

Netgenie will not apply any parental controls nor ask for login every time you access Internet using this device.

If this is not what you intended to do, you need to **login to the admin GUI** and change this setting.

Ok

Screen – Successful Device Whitelist

Part 3: What can NetGenie do for you?

This section explains various useful scenarios in which NetGenie is able to ensure safe Internet experience for office users.

Registration

NetGenie registration is required to avail support subscriptions offered by NetGenie.

- **Why do I need to register my appliance and how do I do it?**

You need to register your NetGenie appliance in order to avail of the following facilities and subscriptions offered by NetGenie:

- Phone and Email support with extended hardware warranty
- Access to Customer Portal

To register your appliance,

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Registration**.
3. Click the link given below SSN (Serial Number – Unique number associated with your NetGenie appliance). It will redirect you to customer.netgenie.net.
4. Please follow the instructions given on screen to register your NetGenie appliance.

Screen – Registered Appliance

Internet Access

This section explains various Internet access scenarios where NetGenie ensures you a safe and secure Internet experience.

- **Is it mandatory to create a user in NetGenie in order to access Internet?**

No, you do not need to create user(s) in NetGenie unless you want to implement role based Internet access for individual(s).

- **How can I access and configure my NetGenie appliance?**

NetGenie can be accessed and configured using its web-based user interface. Refer to [Defaults](#) section for NetGenie’s default IP address and administrator credentials.

- **I want to apply different levels of Internet restrictions to different users as per their role and requirement in my organization, how can I do so?**

Follow the steps given below:

1. Log in to NetGenie with administrator credentials.
2. Go to **Internet Controls** → **Add User**.
3. Specify Username, i.e. name of your employee.
4. Drag the restriction level slider bar to one of the following:
 - List Only – allows access to those Websites only which are listed under [Website List](#).
 - Strict – enforces strict Internet restrictions
 - Moderate – enforces moderate Internet restrictions
 - Minimal – enforces minimal Internet restrictions
 - Safe Surfing – allows Internet access without any restriction

5. Enable Internet Activity Reporting if you want to keep track of websites accessed by the user.
6. Click **Apply**.

Follow steps 2 to 6 to create other users with different Internet access restrictions.

- **Will all of the organization employees receive authentication page every time they try to access Internet through NetGenie?**

Yes, if a user has been created for any of your organization user, they will be required to authenticate every time they try to access the Internet using NetGenie. It is however possible to whitelist the device(s) in order to skip the authentication page but that would mean you would not be able to apply Internet controls or view user-based logs and reports.

NetGenie recommends user authentication if you want to have complete visibility of your employees' Internet activities.

- **Do I need to manually add each website, which I want to be allowed for my employees?**

No, NetGenie's Web categorization has been purpose-built to serve the Internet security needs of users having different roles. You only have to configure role-appropriate Internet access for your employees in order to ensure safe Internet surfing.

- **How can I customize Website category access for a specific user?**

1. Log in to NetGenie with administrator credentials.
2. Select the user for whom you want to edit Website category access settings.
3. Click Website Category List to allow or block website categories. The page given below represents website category access using different color schemes.
 - Green – Allowed Web categories
 - Red – Blocked Web categories
 - Yellow – Partial schedule-based access

Screen- Customized Website Category Access

- I want my employee 'A' to be allowed access to www.facebook.com but I do not want her to access other social networking websites. Is it possible?
 1. Log in to NetGenie with administrator credentials.
 2. [Add](#) or Edit the user that has been created for your employee.
 3. Click [Website List](#), specify www.facebook.com under Allow Websites list and click **OK** to save changes in Website access.
 4. Click [Website Category List](#), block Social Networking web category and click **OK** to save changes in Website Category.
 5. Click **Apply** to save over all access changes.
- I want to allow my employees accessing game sites after office hours. What should I do?

OR
- How can I apply time-based Internet access?

You can configure time-based access for Games Web category.

1. Log in to NetGenie with administrator credentials.
2. [Add](#) or edit the user that has been created for your employee.
3. Click Web Category List to edit access settings.
4. Click 🕒 against Games category to apply time-based access.
5. Click the time slots between 6 PM to 11 PM. It will turn green.
6. Click **OK** to save the changes.

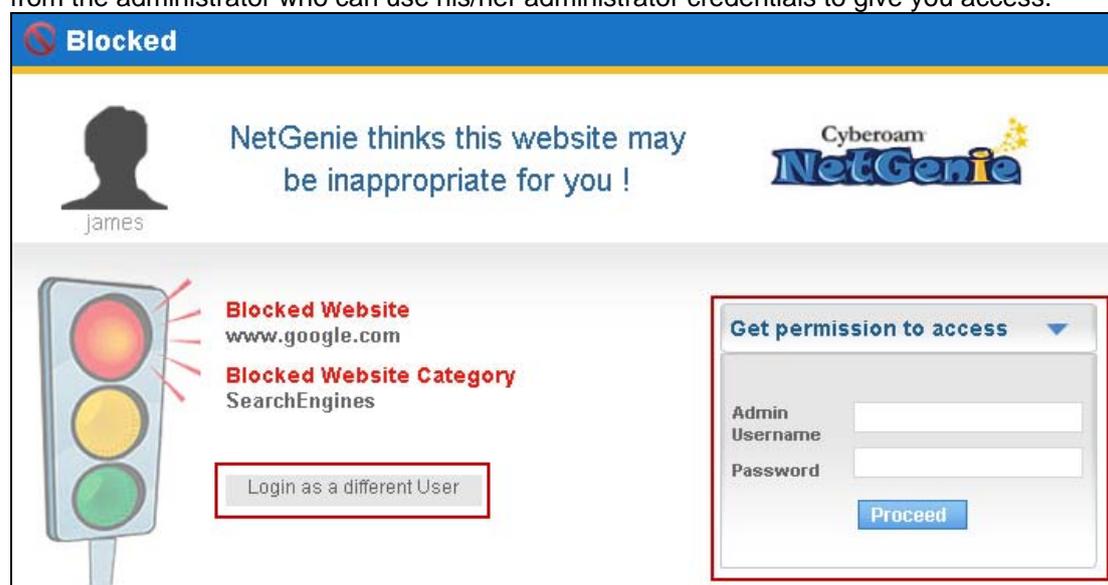

Screen – Time based Web Category Access

- I'm receiving "Blocked Website" message when I try to access www.google.com through NetGenie. Is there any way one can allow access to the blocked website(s) from the authentication page?

NetGenie displays a "Block Website" message if it finds any content of specified websites inappropriate.

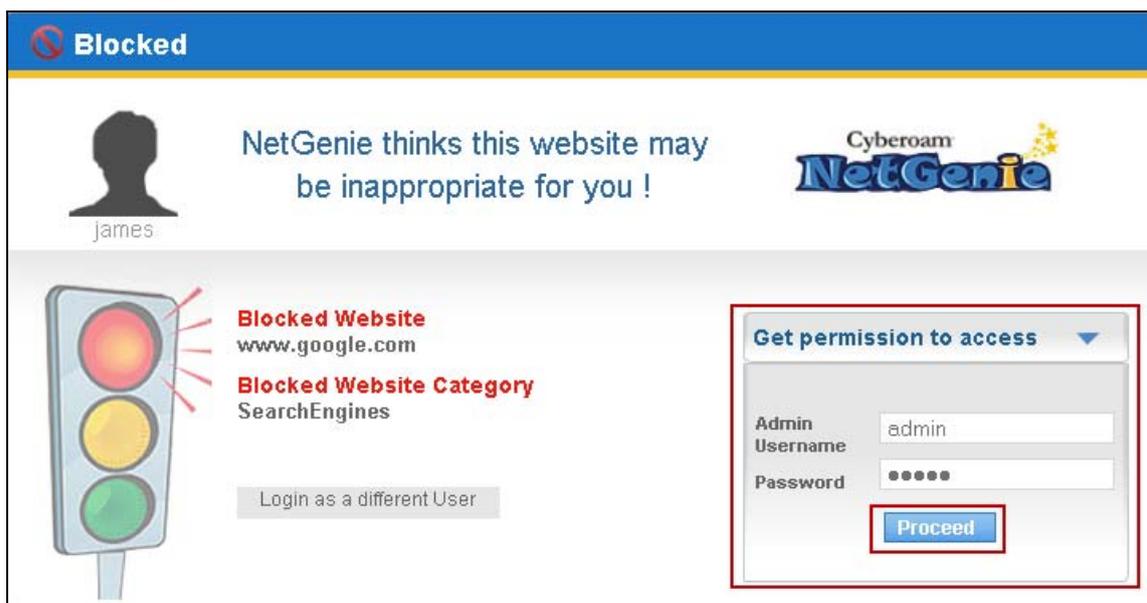

The error page reflects NetGenie's Web categorization for the given URL, which helps users understand the reason why it was blocked. However, if you feel that the specified website is not potentially harmful, you can access it by logging in as a different user or acquiring permission from the administrator who can use his/her administrator credentials to give you access.

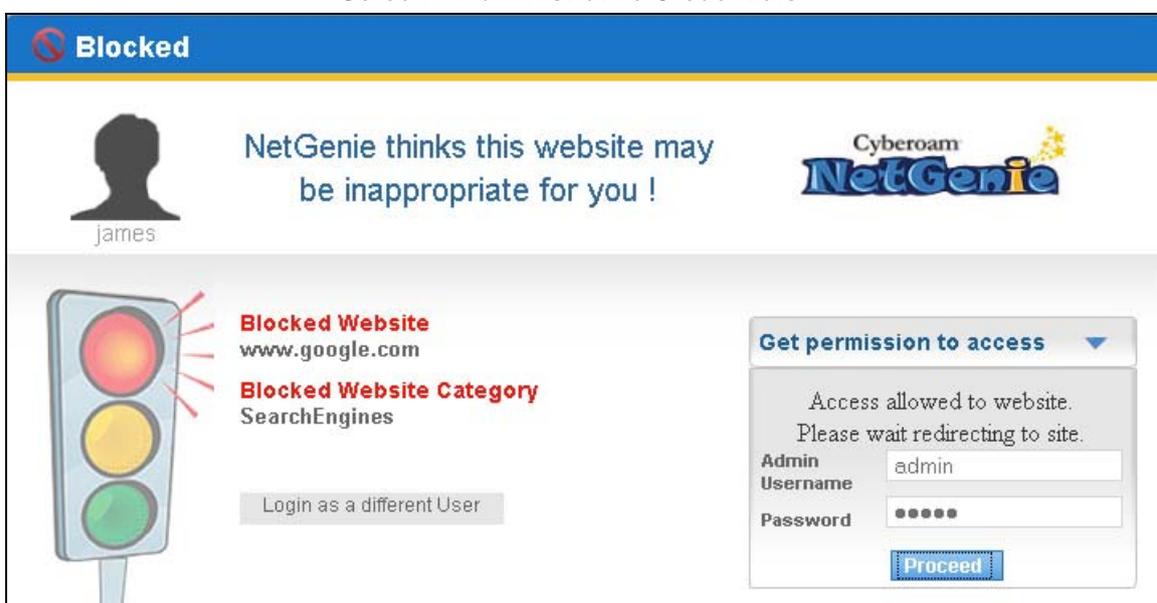

Screen – Access Blocked Website

The following steps allow you to access the blocked website(s) using administrator credentials:

1. Specify administrator username and password.
2. Click **Proceed**.

Screen – Administrative Credentials

Screen – Website Redirection

- **I want to know the categorization for a Website. Is there any way to know the same using NetGenie?**

Yes, NetGenie's Search Category feature allows you to find out the categorization for any given website URL.

1. Log in to NetGenie with administrator credentials.
2. Go to **Internet Controls** → **Search Category**.
3. Specify the website URL in the given textbox.
4. Click **Search** to find out the categorization of the specified website URL.

The search result displays userwise allow/block status of a specified Website URL.

Search Category

Enter Website

Screen- Customized Application Access

- **I am not able to access the Internet using my smartphone, why?**

There can be several reasons for this. Please check the following things are configured properly:

1. Enable smartphone Wi-Fi

Please make sure that Wi-Fi is enabled in your smartphone.

2. Enable NetGenie WPS

Please check that WLAN/WPS LED of your NetGenie appliance has turned green which means WPS is ON in your NetGenie appliance.

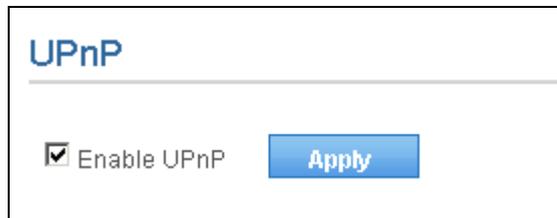

3. Correct Pass Key

Please make sure that you have entered correct pass key to access the NetGenie network. Look for a sticker at the bottom of the appliance for pass key specific to your appliance.

4. Enable UPnP

By default, UPnP is enabled in NetGenie.

1. Log in to NetGenie with administrator credentials.
2. Go to **Security** → **UPnP**.
3. Click checkbox against Enable UPnP, if it is disabled.
4. Click **Apply**.

Screen- Enable UPnP

5. Single Window Supported Browser

There are chances that your smartphone may not support multi window browsers which means you will first need to exit the authentication window in order to surf the Web.

If the problem persists, please contact NetGenie Customer Support Center for assistance.

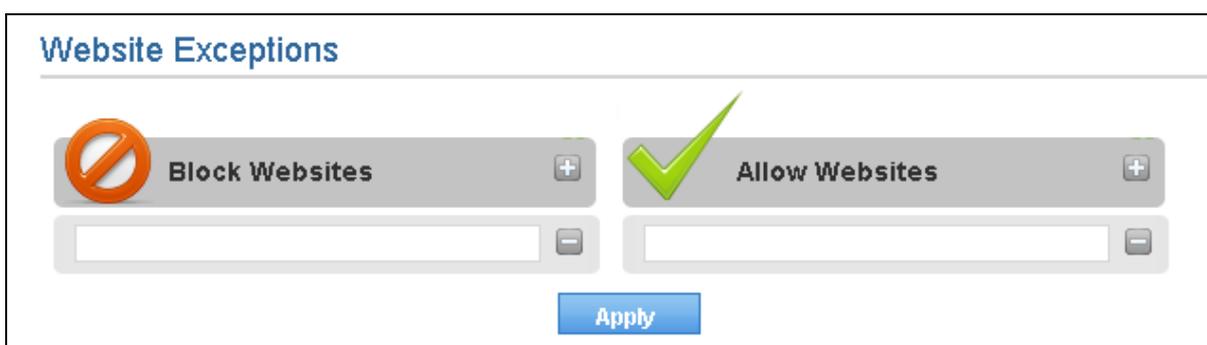

- **I want to allow or block some websites for all users; do I need to individually configure this setting for each and every user?**

OR

- **Is there any way to allow/block websites globally?**

No, you do not need to individually allow or block websites for each and every user.

1. Log in to NetGenie with administrator credentials.
2. Go to **Internet Controls** → **Website Exceptions** to allow or block one or multiple websites globally.
3. Click **+** to add or **-** to remove Website(s) in globally allowed or blocked list.
4. Click **Apply** to save changes.

Screen- Website Exceptions

- **Does NetGenie allow access to uncategorized websites?**

OR

- **How can I block the websites, which are not categorized by NetGenie?**

By default, NetGenie allows access to those Websites, which are not categorized under NetGenie's Web filtering database. To block access to uncategorized Websites,

1. Log in to NetGenie with administrator credentials.

2. Go to **System** → **Overview**.

- **What if one of my employees forgets their password?**

In such a scenario, you will have to reset the password for that employee.

1. Log in to NetGenie with administrator credentials.
2. Go to **Internet Controls** and select the user for whom you want to reset the password.
3. Specify new password and confirm.
4. Click **Apply** to save the changes.

- **I am a traveler and use USB modem to get Internet access; can NetGenie ensure me safe Internet?**

Yes, please refer to [Configure USB modem](#) section for details.

- **My ISP has given me an IP address, where do I need to specify the same in NetGenie?**

Please refer to [Configure Static Internet Connection](#) section.

Device Whitelisting

- **How do I make sure that every time I login using my laptop, I do not have to see the authentication page?**

OR

- **I do not want to authenticate every time I try to access the Internet using NetGenie. What should I do?**

You need to whitelist your laptop or other web device in order to avoid the authentication page each and every time.

If you are logging in as an existing user, please refer to [User Internet Access](#) section to learn how to whitelist a device.

OR

1. Log in to NetGenie with administrator credentials.
2. Go to **Internet Controls** → **Device Whitelist**.
3. Specify MAC address of your laptop/smartphone.
4. Specify description if required.
5. Click **Add** to whitelist your laptop/smartphone.
6. Follow step 3 to 5 if you want to whitelist other devices.

System

- **How do I change my NetGenie administrator password?**

It is recommended to change NetGenie administrator password as soon as you log in for first time.

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Admin Password**.
3. Specify NetGenie's current password.
4. Specify new password to access NetGenie. It can be 16 characters long.
5. Confirm new password.
6. Click **Apply** to save the changes.

The screenshot shows a web form titled "Admin Password". It contains three text input fields: "Old Password" (with 6 masked characters), "New Password" (with 10 masked characters and a note "(Maximum length:16)"), and "Confirm Password" (with 10 masked characters and a note "(Maximum length:16)"). A blue "Apply" button is positioned below the "Confirm Password" field.

Screen- Change Administrator Password

- **How can I view system and security status of my NetGenie Appliance?**

You can view system and security module details from **System** → **Overview** page. This page displays following details of NetGenie appliance:

System Information

- Active Connection(s) – Number of connections to the NetGenie appliance.
- Firmware Version – Firmware version running on your NetGenie appliance.
- SSN – Unique SSN number which is used NetGenie support team to identify your NetGenie appliance.

Security Status

- Internet Controls – Status of Internet Controls module
- Anti-Virus – Status of Anti-Virus service
- Zip File Scan – Status of zip file scanning
- Intrusion Prevention – Status of Intrusion Prevention service
- Application Controls – Status of application controls
- Web Protection – Status of Web Protection service
- Activity Reporting – Status of logging and reporting service

Screen- System Overview

Networking

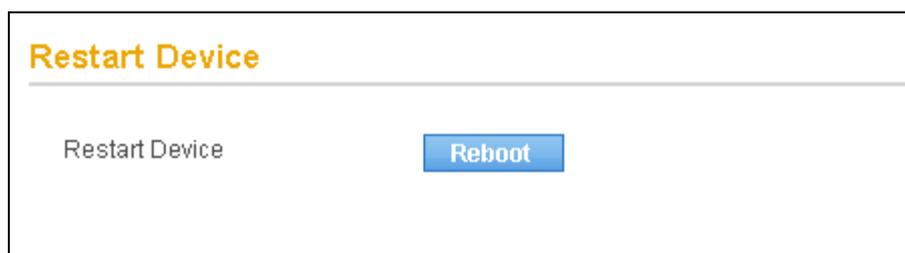

- **How many computers or devices can be connected wirelessly to NetGenie at the same time?**

A maximum of twenty (20) devices can be wirelessly connected to NetGenie at any instance.

- **Internet access through my NetGenie appliance has stopped. What should I do?**

You need to restart your NetGenie appliance in order to get back Internet access.

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Restart Device** to restart your NetGenie appliance.
3. Click **Reboot** to restart your NetGenie appliance.

Screen- Restart NetGenie Appliance

Note:

This action will only restart your NetGenie appliance. To reset appliance to factory default settings, keep the reset button (positioned next to the WPS switch of your appliance) pressed for 5 seconds. While doing so, all past upgrades and configurations will be lost.

- **How do I know that my NetGenie is having Internet connection?**

Check the WAN LED of your NetGenie appliance. If it blinks green, it means your NetGenie appliance is able to connect to the Internet.

- **How can I verify that my NetGenie appliance is Wi-Fi enabled?**

By default, NetGenie appliance(s) are wireless enabled.

Check WLAN/WPS LED of your NetGenie appliance. If it blinks green, it means Wi-Fi is enabled in your NetGenie appliance. If it does not, then follow the given steps:

1. Log in to NetGenie with administrator credentials.
2. Go to **Network Settings** → **Wireless** and select the checkbox “Enable Wireless” to enable wireless connectivity in your NetGenie appliance.
3. Click **Apply** to save the changes.

Screen- Enable NetGenie Wireless

- **How can I wirelessly connect my laptop to NetGenie?**

To connect NetGenie wirelessly, you should have a wireless network adapter-enabled laptop. When your laptop starts, it will automatically detect the wireless network (also called SSID) named “NetGenie”. Click the network icon in your machine's system tray (bottom-right of your screen) and select “NetGenie”. After selecting “NetGenie”, you will be asked to enter the Security/Pass Key printed on the sticker at the bottom of your appliance. This will connect you to the NetGenie appliance over Wi-Fi.

- **Can I insert my telephone cable directly to my NetGenie appliance to access Internet?**

No, you need to connect ADSL Router/Cable modem with NetGenie appliance in order to access Internet.

- **I do not want others to see my network due to security reasons. Is there any way to hide visibility of my network to wireless users?**

Yes, you can hide your network from other wireless users. Follow the given steps below:

1. Log in to NetGenie with administrator credentials.
2. Go to **Network Settings** → **Wireless**.
3. Enable “Hide SSID”.
4. Click **Apply** to save the changes.

Wireless

Enable Wireless

Network Mode: 802.11 B/G/N mixed mode

Upgrade, Back-up, Restore

- How can I check availability of upgrade(s) available for my NetGenie appliance?**

Visit one of the following websites to get the information regarding signatures and firmware upgrades available for your NetGenie appliance.

 - <http://customer.netgenie.net/>
 - <http://download.netgenie.net/>
- Can I apply downloaded firmware upgrade(s) to my NetGenie appliance?**

Yes, you can take the back-up of your current NetGenie configuration so that it can be restored at a later stage.

 - Log in to NetGenie with administrator credentials.
 - Go to **System** → **Firmware Upgrade**.
 - Browse the firmware file stored in your machine.

Firmware Upgrade

Upload Firmware: D:\New Folder\New Folder\New Text Docum

Retain Current Configuration

Reset Configuration

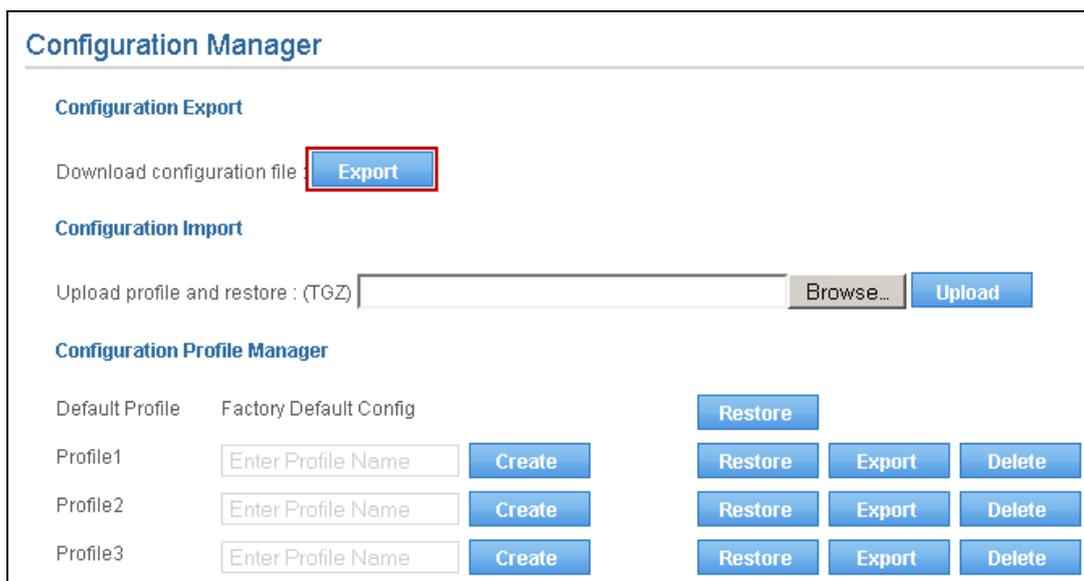

Upload Firmware

- Select 'Retain Current Configuration' option if you want to retain all configuration changes made by you in various modules of NetGenie or else click 'Reset Configuration'.
 - Click **Apply**.
- Can I save my current NetGenie configuration for future use i.e. in case of system crash or change in settings?**

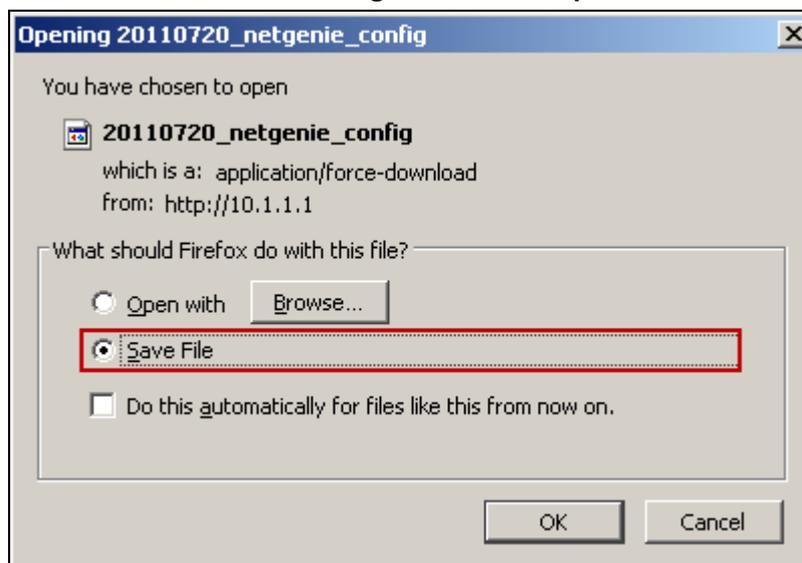

Yes, you can take the back-up of your current NetGenie configuration and restore it at a later stage.

 - Log in to NetGenie with administrator credentials.
 - Go to **System** → **Config Manager**.

3. Click **Export** to download the current configuration of NetGenie appliance.

Screen- Configuration Back-up

Screen- Save Configuration Back-up

Note:

The back-up file will be a TGZ file.

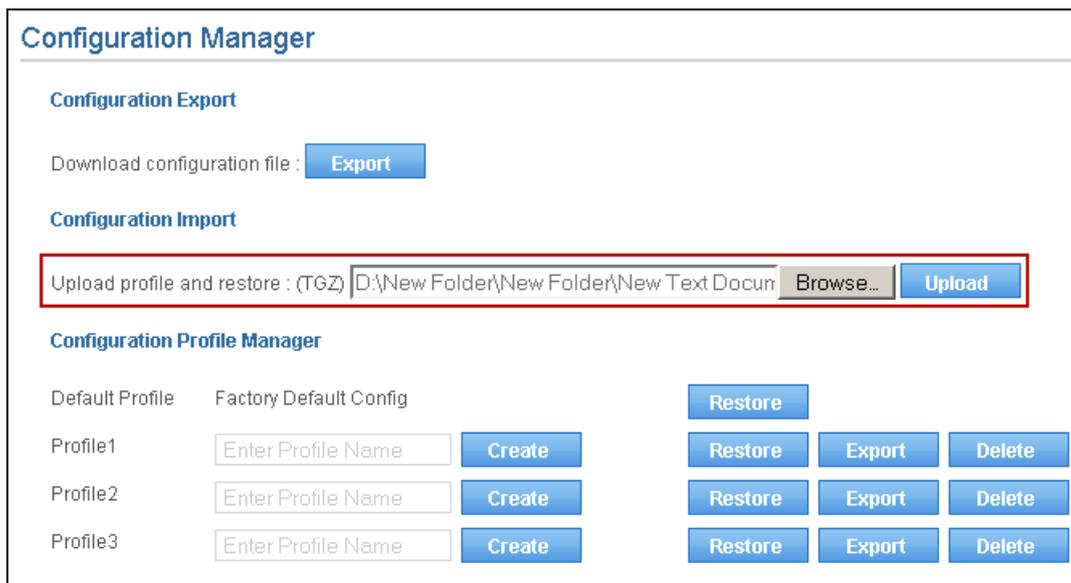

- **My system is crashed but I do have configuration back-up I took a few days back. What should I do to restore my NetGenie settings:**

OR

- **How to restore configuration back-up in NetGenie appliance?**

To restore NetGenie configuration,

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Config Manager**.
3. Browse the back-up file stored in your machine.
4. Click **Upload** to restore back-up.

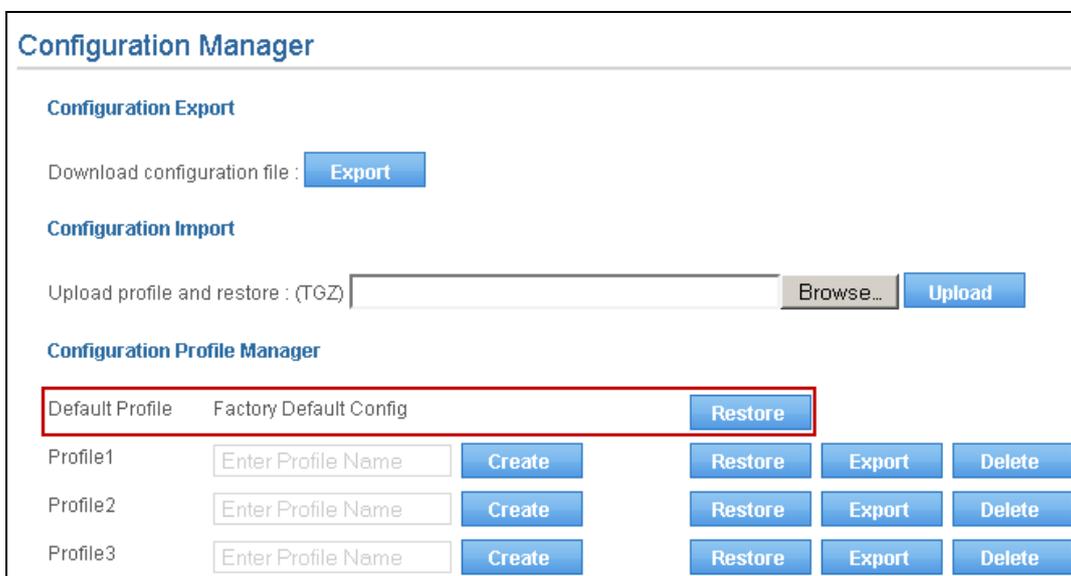

Screen- Restore Back-up

- **How can I restore Factory Default Configuration?**

There are two ways to restore NetGenie's Factory Default configuration:
Keep the reset key (given next to WPS switch of your appliance) pressed for 5 seconds.

OR

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Config Manager**.
3. Click **Restore** for Default Profile - Factory Default Configuration under Configuration Profile Manager section.

Screen- Restore Factory Default Configuration

- **How many configuration snapshots can I store on NetGenie appliance?**

You can create and store a maximum of 3 (three) configuration snapshots on NetGenie appliance.

1. Log in to NetGenie with administrator credentials.
2. Go to **System** → **Config Manager**.
3. Specify name of the profile to be created under Configuration Profile Manager section.
4. Click **Create** to store configuration snapshot on NetGenie appliance.

- **I have set time as per my local time zone but why is NetGenie still not showing it?**

NetGenie communicates with NTP servers over Internet to update system time. If NetGenie does not have Internet connectivity, system time will not be synchronized with NTP server. Hence, perform the following checks:

- WAN cable is properly connected to NetGenie WAN socket.
- WAN port is blinking green.

If you are sure that NetGenie appliance is able to connect to the Internet, please click **Sync Now** to synchronize NetGenie appliance system time with NTP server otherwise you can manually set date and time.

- **Can I send NetGenie logs to third party server?**

Yes, you can configure your NetGenie appliance to send logs to an external syslog server.

1. Log in to NetGenie with administrator credentials.
2. Go to **Logs and Reports** → **Configuration**.
3. Specify name or IP address of the external syslog server.
4. Specify port number in the range of 1 to 65535. Default port number is 514.

The screenshot shows the 'Configuration' page with a sub-section for 'System Log'. There are two input fields: 'Syslog Server' with the value '10.1.1.2' and '(Name or IP)' to its right, and 'Port(1-65535)' with the value '514'. Below these fields is a blue 'Apply' button.

Screen – Syslog Configuration

5. Click **Apply** to save the changes.

- **Is there any way to turn off NetGenie’s logging feature?**

Yes, you can disable NetGenie’s logging feature (not recommended) by the following steps:

1. Log in to NetGenie with administrator credentials.
2. Go to **Logs and Reports** → **Configuration**.
3. Select checkbox ‘Disable all logs’ to stop NetGenie’s logging and reporting engine.

Screen – Disable Logging

4. Click **Apply** to save changes.

Some Advanced Configuration

Pre-requisite:

This section requires basic understanding of networking concepts.

This section explains NetGenie’s advanced security configurations that includes firewall, port forwarding, granular anti virus, custom Intrusion Prevention System and many more.

- **Does NetGenie prevent my network from Web as well email-based viruses? What happens when NetGenie encounters any Virus?**

Yes, NetGenie ensures clean Web and Email traffic. NetGenie scans all incoming and outgoing traffic over Web and Email.

In case of malware occurrence, NetGenie logs the malware and cleans it. However, you can change the course of action to be taken to deal with malware (though it is not recommended).

1. Log in to NetGenie with administrator credentials.
2. Go to **Security** → **Anti Virus**.

Screen- Enable Anti-Virus Protection

3. Expand ‘Show Advanced Settings’ drop-down. Under Action Configuration section, you can change actions to be taken on malware.

- **I do not want NetGenie to scan MS-Word documents for viruses, is it possible?**

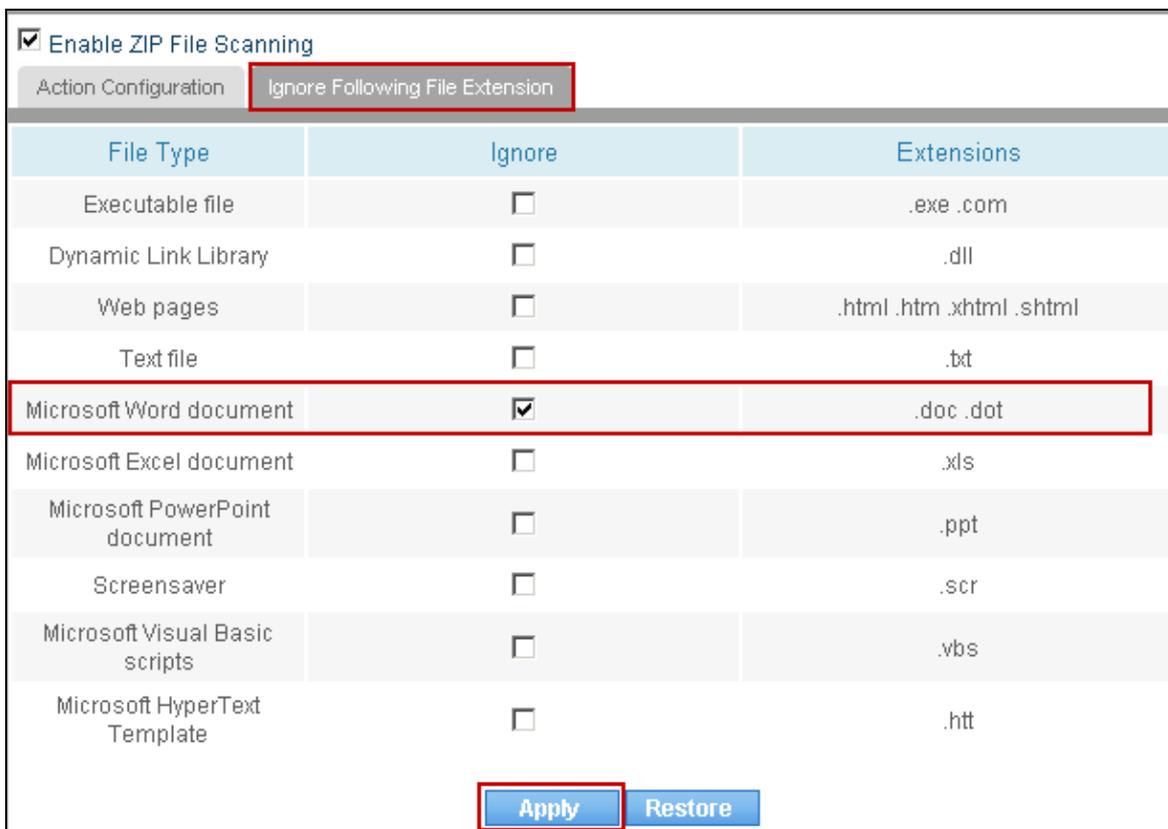

Yes, you can customize anti virus protection cover provided by NetGenie. Please follow the given below steps to do so:

1. Log in to NetGenie with administrative credentials.
2. Go to **Security** → **Anti Virus**.

Screen- Enable Anti Virus Protection

- Expand 'Show Advanced Settings' drop-down, click 'Ignore Following File Extensions' tab and select checkbox against Microsoft Word Document.

Screen- Advanced Anti Virus Settings

- Click **Apply** to save changes.

- What does NetGenie offer under Intrusion Prevention System?**

NetGenie's Intrusion Prevention System is a signature-based system, which performs following security checks to prevent your network from malicious traffic.

- Protocol Anomaly Detection
- Port Scan Prevention
- Traffic Anomaly Detection
- Web Protection

You can enable or disable above components as and when required.

1. Log in to NetGenie with administrator credentials.
2. Go to **Security** → **Intrusion Prevention**.

Screen- Enable Intrusion Prevention

- Expand 'Show Advanced Settings' drop-down, and change the default security settings if required.

Screen- Advanced Intrusion Prevention

- Click **Apply** to save changes.
- Can I customize NetGenie's intrusion prevention signatures?**
Yes, you can change Action to be taken and Logging status of any intrusion prevention signature. Please follow below steps to customize intrusion prevention signatures:
 - Log in to NetGenie with administrator credentials.
 - Go to **Security** → **Intrusion Prevention**.
 - Expand 'Show Advanced Settings' drop-down. Under Signature Configuration section, you can search intrusion prevention signatures based on the following criteria:
 - Outbreak
 - Severity
 - Policy
 - Platform
 - ID or Name
 - Select the signature to be customized and change the Log status if required. Available options:
 - Log
 - No
 - Change Action to be taken if required, Possible actions:
 - Pass
 - Drop Packet
 - Drop Session

• **What is Port Forwarding? How can I configure port forwarding in NetGenie?**

Port forwarding is useful when you want to keep unwanted traffic away from your network. It allows you to use one IP address for all external Internet communications and hosting multiple servers (Web, FTP and Gaming) with different IPs and ports internally. It will hide service(s) running on your network.

To configure port forwarding in NetGenie,

1. Log in to NetGenie with administrator credentials.
2. Go to **Security** → **Port Forwarding**.
3. Specify application name for which you want to create port forwarding rule.
4. Specify start and end ports for the application.
5. Specify IP address of the server where the application is hosted.
6. Click **Add Service** to create port forwarding rule.

- Use your Internet IP address (public IP address provided by your ISP) to access NetGenie over Internet. Please remember that if your Internet connection type is set to DHCP from **Network Settings** → **Internet** then you will need to select your DNS server as Dynamic DNS from **Network Settings** → **Dynamic DNS** and register your public IP address with the Dynamic DNS provider.

Screen- Dynamic DNS

- Is there any single page from where I can get the complete network overview?

Log in to NetGenie with administrator credentials and go to **Network Settings** → **Overview**. This page displays following details of NetGenie network:

Internet

- Protocol Type – Internet connection type. Possible protocol types are
 - DHCP
 - Static
 - PPPoE
 - USB Modem
- IP Address – WAN IP address of NetGenie appliance with Renew button (in case of DHCP Internet connection type).
- Network Mask – Network mask IP address
- Gateway – IP address of NetGenie gateway
- Primary DNS Server – IP address of primary DNS server
- Secondary DNS Server – IP address of secondary DNS server
- Received – Amount of data received (in packets and KB) by NetGenie over WAN
- Transmitted – Amount of data transmitted (in packets and KB) through NetGenie over WAN

Local Network

- IP Address – LAN IP address of NetGenie appliance
- Network Mask – Network mask IP address
- DHCP Server – Status of DHCP server. Possible status:
 - On
 - Off
- Received – Amount of data received (in packets and KB) by NetGenie over LAN
- Transmitted – Amount of data transmitted (in packets and KB) through NetGenie over LAN

Screen- Network Overview

- I want to change the default IP address of my NetGenie appliance, can I do it?

Yes, you can change the default LAN IP address of your NetGenie appliance. To do it,

1. Log in to NetGenie with administrator credentials.
2. Go to **Network Settings** → **Local Network**.
3. Specify a new IP address for your NetGenie appliance.
4. Select checkbox against 'Enable DHCP server' if you want NetGenie to lease IP addresses to multiple devices.
5. Specify the number of IP addresses to be leased by NetGenie.

- Why do I need to clone the MAC address of my router?

When you want to add a router/switch to your Internet connection, you will need to clone your MAC address. This is done because some ISPs tie your MAC address to their DHCP server so

making any changes to the router leads to chances that the ISP will not allow you to surf the Internet since the MAC address listed in the ISP list will be different from that of your new router. We recommended you to clone the MAC address in order to ensure uninterrupted connectivity.

The given steps below enable you to clone the MAC address of your router:

1. Log in to NetGenie with administrator credentials.
2. Go to **Network Settings** → **Internet**.
3. Select any Internet connection types and fill up the required details.
4. Enable 'MAC address clone' option and specify the MAC address to be cloned.
5. Click **Apply** to save changes.

MAC address clone Enable Disable

Screen- MAC Cloning

- **I want to allow all TCP traffic passing through port 80, can I do so?**

Yes, you can allow or block TCP or UDP traffic over any specific port or port range.

1. Log in to NetGenie with administrator credentials.
2. Go to **Security** → **Firewall**.
3. Specify direction of the traffic as LAN to WAN.
4. Specify Source Address and Destination Address as 'Any'.
5. Select protocol as TCP from dropdown.
6. Select Destination Port as 'Range' and specify port number as 80.
7. Select action item as 'Accept'.
8. Select check-box against Log to enable logging for this rule.
9. Specify description, if required.
10. Click **Add Rule** to save changes.
